

Multiport Manifolds

Four way manifold components:

1 - 1 x 1½" gunmetal manifold body

2 - 4 x short gunmetal meter carriers

3 - 4 x ½" x ½" hexagon gunmetal nipples

4 - 2 x ¾" DZR end caps

5 - 1 x ½" plastic dust cap

2 x BSS119 nitrile O-rings and 4 x ¾" plastic thread protectors also included

Our manifolds are hugely popular with developers for use in flats and apartments. They are ideal when single buildings require multiple water meters or when there are a number of dwellings built close together.

The manifolds are supplied with 4 or 6 outlets as standard. However they can be linked together and supplied with variations up to a maximum of 14 outlets. Our 6 way manifold is designed to fit inside a 600mm x 450mm pit section and being gunmetal it is both strong and corrosion resistant.

All of the critical parts are 100% tested for leakage before assembly to ensure you receive a quality product. The water service pipe is connected to the inlet at the back of the manifold and the water supply is channelled to each of the outlets. Each outlet has its own stopcock and meter carrier so that a water meter can be fitted. The manifolds are normally supplied with a 1½" BSP inlet and a ¾" BSP Female Iron outlet (25mm compression outlets can be fitted).

These manifolds are often connected to barrier pipe and are strongly recommended when working on a brownfield site or in contaminated land.

Gunmetal Meter Carriers

Female Meter Carrier

Meter Carrier with Stopcock

Our female meter carrier and meter carrier with stopcock are both:

- Suitable for use above or below ground
- Supplied with 4 drilled holes in the feet to allow fixing to a wall
- Have ¾" BSP Female ends to accept copper or steel pipes
- Available with plastic dust caps or acetal kemetal caps
